

# Ultaire™ AKP

## Move over, metal

Little has changed with removable partial dentures (RPDs) over the decades. Metal frames are still being used despite the fact that they are heavy, can damage remaining teeth, and may cause a metallic aftertaste. Plus, patients complain about the look of metal in their mouths. Today, there is a new solution from Solvay Dental 360™ that changes the way dentists, labs and patients think about RPD frames.

## Introducing Ultaire™ AKP from Solvay Dental 360™

Ultaire™ AKP is an innovative, high-performance polymer that provides a comfortable, lightweight, biocompatible and more aesthetically pleasing alternative to traditional metal frames. Ultaire™ AKP partial dentures have similar mechanical properties to corticle bone, are tooth and tissue supported and may help minimize bone loss.

For patients who can't bear the thought of visible clasps or the additional challenges of other frame materials, Ultaire™ AKP delivers a revolutionary option. Dentists may see improved patient compliance, minimal fitting sessions and high patient satisfaction.

# Accelerating dentistry, together

At Solvay Dental 360™, our polymer scientists worked alongside dental laboratories and dentists to ensure that Ultaire™ AKP surpasses your current material standards.

## About Solvay Dental 360™

Solvay Dental 360™ is built upon Solvay's world-leading high-performance polymer portfolio, which includes over 35 brands available in over 1,500 formulations for use in demanding applications, including medical devices, around the world. This extensive portfolio allows Solvay to offer the right polymer for the right application. We engineer products that meet critical performance requirements to address the unmet needs of medical professionals and patients.
